

Explanation Key: How to use this table

Use this table to determine how much of a LIHEAP benefit a household may receive for this fiscal year.

Step 1: Before you start working through the table, you must see if the household is eligible for a LIHEAP benefit. That will depend on the size of the household and the combined income of its members. A household is people who live together. It may be one person, a family, or another group who share the home.

Income Limits for FY 2024

1 person	\$49,814	5 people	\$111,124
2 people	\$65,141	6 people	\$126,452
3 people	\$80,469	Additional guidelines are calculated by taking 132% plus 3 percentage points for each household member above six	
4 people	\$95,797	multiplied by the guideline for a household of four.	

IF the household income is less than or equal to the income limit for the persons, go to step 2. IF NOT, the household is ineligible.

Step 2: Next, is your house a "single family" home (SF) or "multifamily" (MF)? Multifamily usually means apartments. Go to the section that lists the "Home Type" group for you -- SF or MF.

Step 3: Now, find the "Income Household's" line for the number of "People" in your home. This is the number on the table that is just lower than your combined household income. Example: If you are in an apartment with 4 people, and your annual income is \$4100, you would go the line that says MF 4000 4.

Step 4: Find the home heating source for your home. That tells you the maximum benefit for you. Example of a household living in a multifamily building, with an income of \$4,000, four people in the household, and a gas heated home: The maximum benefit is \$1800, which may be applied to the electric bill. The oil benefit is never more than \$1500. But, you can instruct DOEE to pay the utility company that supplies cooking electricity or gas.

Example of a household living in a multifamily building, with an income of \$4,000, four people in the household, and an oil heated home: MF 4000 4: Instead of paying the oil company, you can have DOEE pay a maximum of \$1,471 gas or \$883 electric. If your utilities are included in your rent, so that Heat is In Rent (HIR), the benefit can never be more than \$250, paid directly to your utility company for your electric or gas used for cooking or light, etc. DOEE pays the utility company directly.

Note: For households with greater than four people, use the benefit line for "4" people. (This table continues on the next page.)
